

VigilantSG

Redefining Community Policing

A COMMUNITY POLICING PORTAL
& MOBILE APPLICATION

Developed with Singapore's Smart Nation vision in mind, VigilantSG is a web and mobile application designed to assist members of the Citizens-On-Patrol Programme (COP) and the Singapore Police Force (SPF) in conducting their patrol work more effectively and efficiently.

This includes facilitating communication and transfer of information via report forms and hotspot or areas of interest location indicators. Additionally, VigilantSG aims to help speed up the overall COP-SPF administrative work process by providing key features such as attendance taking.

DIGITAL MEDIA &
INFOCOMM TECHNOLOGY

The members of the Citizen-On-Patrol (COP) Programme have no proper, easy way of communicating information to the Singapore Police Force (SPF) and vice versa. This often leads to delays in data and intel transfer, some of which could be vital to ensuring the safety of Singapore.

Thus, the idea for VigilantSG was born.

Developed in collaboration with the SPF Jurong West Neighbourhood Police Centre, VigilantSG aims to address the inefficient administrative work and communication issues that plague the efforts of the COP Programme and the SPF.
